Advanced Features

- Bootstrap.
- Social Media Integration.
- Unit Tests.
- SignalR.
- Accessibility.

Bootstrap

- Bootstrap is amazing!
- It is so easy to align your stuff it also makes your webapp cleaner.
- Buttons are amazing!
- It's always great to have a feedback from the webapp, rather than guessing whether something works or not.

Bootstrap

Microsoft

Social Media Integration

Unit Tests

- Found bugs in my API because of it.

- Sometimes it cannot find the video because I didn't have a condition to check whether videos count is larger than 0.

- This saves a lot of debugging time for small mistakes.

```csharp
videos.RemoveRange(1, videos.Count - 1);
videos[0].IsFavourite = true;
int iCount = 0;

if (videos.Count >= 1)
{
    iCount = videos.Count;
    videos.RemoveRange(1, iCount);
}
```

Unit Tests

- Also another one where I forget that the size is not the last range, cause it starts with 0.

```
if (videos.Count >= 1)
if (videos.Count > 1)
{
    iCount = videos.Count;
    iCount = videos.Count - 1;
    videos.RemoveRange(1, iCount);
}
```

Microsoft

Accessibility

Microsoft
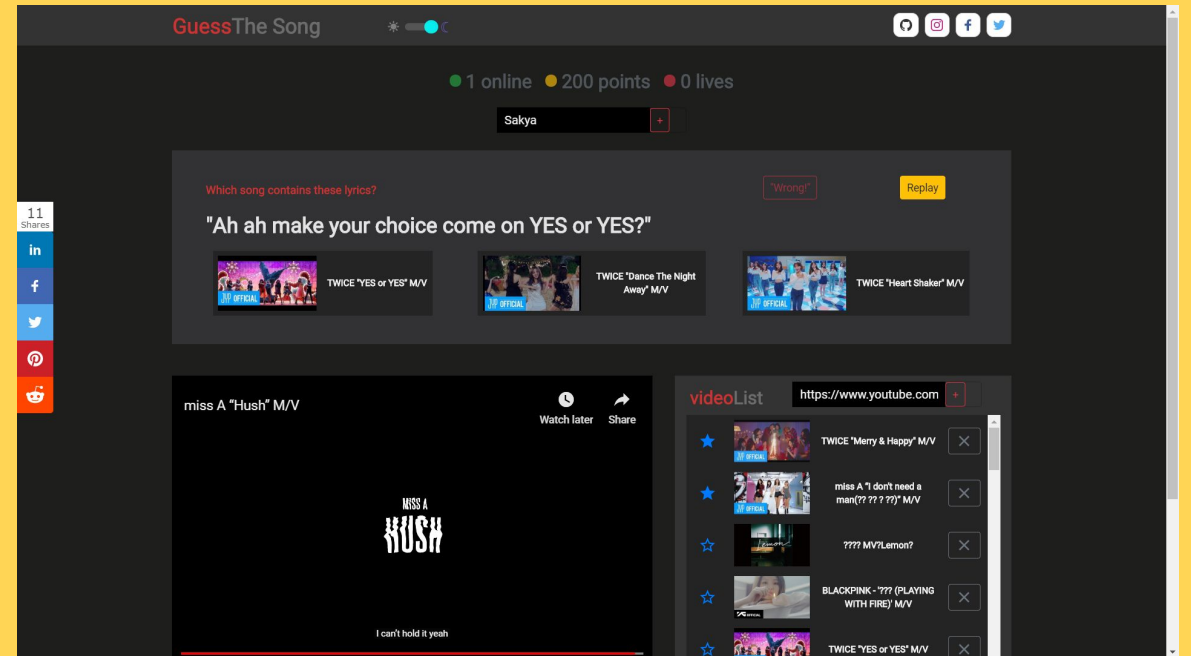

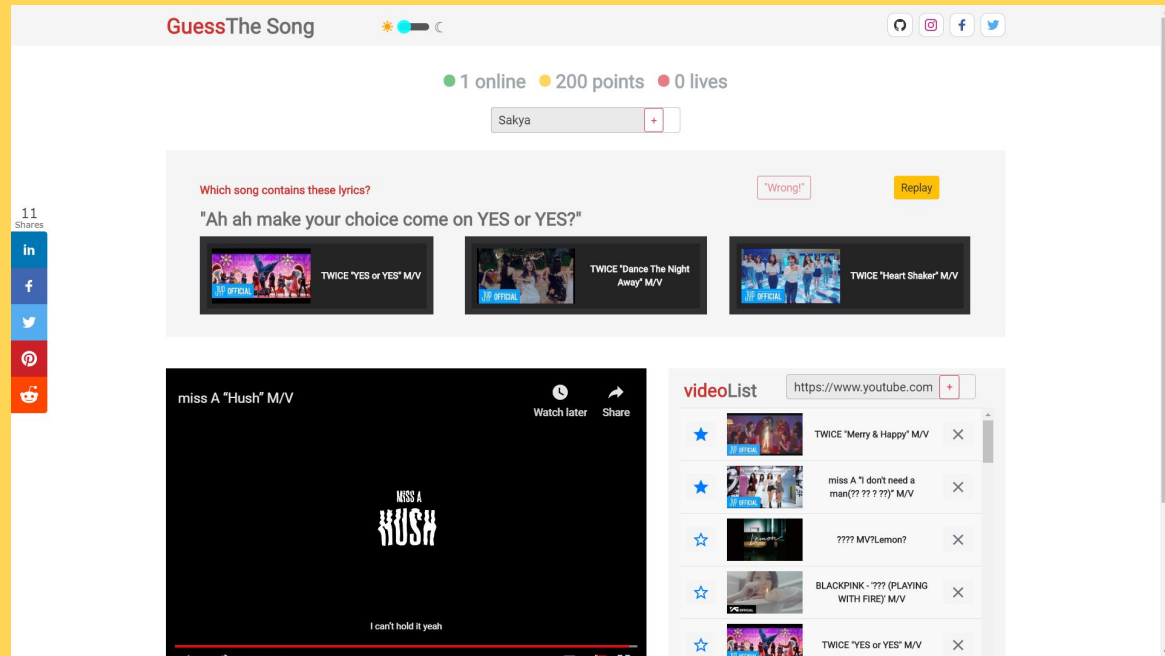

SignalR

- Let you know how many people are online.
- Also updates videos and deleted videos.

Bugs, Exploits, and What I can DO Better

- Videos API get two consecutive video.
- Assign videos into buttons and colors after the creation. (in render rather than before I push it to the array)
